gene between Drosophila virilis and Drosophila melanogaster.";
LL Mech. Dev. 49:107-116(1995).
CC -1- FUNCTION: DNA-BINDING REGULATORY PROTEIN IMPLICATED IN EARLY
DEVELOPMENT. INVOLVED IN NEUBRONAL CELL FATE DECISION. MAY ACT AS
CAN OCTAMER-DEPENDENT ACTIVATOR OF TRANSCRIPTION (BY SIMILARITY).
CC -1- SUBCELLULAR LOCATION: NUCLEAR.
CC -1- SUBCELLULAR LOCATION: NUCLEAR.
CC -1- SUBCELLULAR STAGE: EXPRESSED PRIMARILY DURING THE FIRST HALF OF
CC EMBRYOGENESIS. INITIAL EXPRESSED NI OF CLULLAR BLASTODERM STAGE,
CC THEN IN ECTODERMAL STRIPES DURING GERMBAND EXTENSION. BROAD
EXPRESSION IN THE NEUROECTODERM FOLLOWED BY LIMITATION TO DISCRETE
CC SUBSETS OF CMS CELLS, AND EXPRESSION IN SECIFIC PMS NEURONS AND
CC SUBSETS OF CMS CELLS, AND EXPRESSION IN FACTOR FAMILY.
CC -1- SIMILARITY: BELONGS TO THE POU TRANSCRIPTION FACTOR FAMILY.

CATALYTIC ACTIVITY: ATP + D-hexose = ADP + D-hexose 6-phosphate.
ENZYME REGULATION: THE USE OF ALTERNATIVE PROMOTERS APPARENTLY
ENABLES THE TYPE IV HEXOKINASE GENE TO BE REGULATED BY INSULIN IN THE LIVER AND GLUCOSE IN THE BETA CELL. THIS MAY CONSTITUTE A IMPORTANT FEEDBACK LOOP FOR MAINTAINING GLUCOSE HOMEOSTASIS.

ALTERNATIVE PRODUCTS: 3 isoforms; 1 (shown here), 2 and 3; are produced by alternative splicing.

TISSUE SPECIFICITY: PANCREAS (ISOFORMS 1 AND 2) AND LIVER (ISOFO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: BELONGS TO THE HEXOKINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MISCELLANEOUS: IN VERTEBRATES THERE ARE FOUR MAJOR GLUCOSE-PHOSPHORYLATING ISOENZYMES, DESIGNATED HEXOKINASE I, II, II

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBCELLULAR LOCATION: NUCLEAR (Probable).

SUBCELLULAR LOCATION: NUCLEAR (Probable).

TISSUE SPECIFICITY: EXPRESSED IN PRIMARY NEURAL PRECURSORS.

TISSUE SPECIFICITY: EXPRESSED IN PRIMARY NEURAL PRECURSORS.

DEVELOPMENTAL STAGE: FIRST DETECTED IN PREBLASTODERM CYCLE 12 I

ALL NUCLEI. DURING MIDDLE TO LATE CYCLE 13, EXPRESSED IN EIGHT STRIPES THAT OVERLAP THOSE OF THE HALRY PROTEIN.

DOMAIN: HAS A PARTICULAR TYPE OF BASIC DOMAIN (PRESENCE OF A HELIX-INTERRUPTING PROLINE) THAT BINDS TO THE N-BOX (CACNAG), RATHER THAN THE CARONICAL E-BOX (CANNTG).

DOMAIN: THE CARONICAL E-BOX (CANNTG).

TRANSCRIPTIONAL CO-REPRESSOR RECRUITED TO SPECIFIC TARGET DNA 1

TRANSCRIPTIONAL CO-REPRESSOR RECRUITED TO SPECIFIC TARGET DNA 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      HAIRY-RELATED PROTEINS. SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY TRANSCRIPTION FACTORS. "HAIRY" SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: TRANSCRIPTIONAL REPRESSOR OF GENES THAT REQUIRE A BHLH PROTEIN FOR THEIR TRANSCRIPTION. LIKELY TO BE INVOLVED IN THE FUNCTIONAL RATHER THAN THE MORPHOLOGICAL DIFFERENTIATION OF REURONS, LOSS OF DPN FUNCTION RESULTS IN WEAK MOTOR ACTIVITY, LETHARGIC BEHAVIOR, AND DEATH. IMPLICATED IN SEX DETERMINATION AS GROUCHO-DPN COMPLEX ACT DIRECTLY TO REPRESS SXL TRANSCRIPTION. SUBUNIT: TRANSCRIPTION REPRESSION REQUIRES FORMATION OF A COMPLEX SUBUNIT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          79:805-815(1994).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S48025; AAB24149.1; -.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   æ
                                                                        2,6-beta-D-galactosyl-1,4-N-acetyl-beta-D-glucosamine.
PATHWAY: Glycosylation.
SUBCELULIAR LOCATION: TYPE II MEMBRANE PROTEIN. MEMBRA
FORM IN TRANS CISTERNAE OF GOLGI, SOLUBLE FORM IN BODY
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN TESTES, BRAIN
AND TO A LESSER EXTENT IN LUNG AND HEART.
PTM: THE SOLUBLE FORM DERIVES FROM THE MEMBRANE FORM B
PTM: THE SOLUBLE FORM DERIVES FROM THE MEMBRANE FORM B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STPES

CHARGE SUBUNIT: THE AMINO-TERMINAL ZINC FINGER INTERACTS WITH FOG1.

CHARGE SUBUNIT: THE AMINO-TERMINAL ZINC FINGER INTERACTS WITH FOG1.

CHARGE SPECIFICITY: ERYTHROCYTE.

CHARGE SPECIFIC: STABLE DIA BINDING. THE FIRST FINGER IS RECEIVE SPECIFIC. STABLE DIA BINDING. THE FIRST FINGER IS NECESSARY ONLY FOR FULL SPECIFICITY AND STABILITY OF BINDING, WHEREAS THE SECOND ONE IS REDOURED FOR BINDING (BY SIMILARITY).

CHARGES IN GATAL ARE THE CAUSE OF X-LINKED DYSERYTHROPOIETIC ANEMIA AND THROMBOCYTOPENIA (XDAT), A DISORDER CHARGETERIZED BY EXYTHROCYTES WITH ABNORMAL SIZE AND SHAPE, AND PERPENSEN SHAPE ABNORMAL SIZE AND SHAPE, AND PERPENSEN SHAPE ABNORMAL THE BONE MARROW CONTAINS ABUNDANT AND ABNORMALLY SMALL MEGAKARYOCYTES.

CHARGITY OF PLATELETS IN PERPENSEN BLOOD. THE BONE MARROW CONTAINS ABUNDANT AND ABNORMALLY SMALL MEGAKARYOCYTES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Blood 98:2681-2688(2001).

-I- FUNCTION: TRANSCRIPTIONAL ACTIVATOR WHICH PROBABLY SERVES AS A GENERAL SWITCH FACTOR FOR ERYTHROID DEVELOPMENT. IT BINDS TO DNA SITES WITH THE CONSENSUS SEQUENCE (A/T)(ATA(A/G) WITHIN REGULATOR REGIONS OF GLOBIN GENES AND OF OTHER GENES EXPRESSED IN ERYTHROII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VARIANT XDAT SER-208.

"Characterization of a molluscum contagiosum virus homolog vaccinia virus p37K major envelope antigen.";

J. Virol. 65:3583-3589(1991).

-i- FUNCTION: THIS PROTEIN IS THE MAJOR ANTIGEN ON THE ENVEXTRACELLULAR VIRUS.

-i- SIMILARITY: TO VACCINIA VIRUS 37 kDa ENVELOPE PROTEIN.

-i- SIMILARITY: CONTAINS 1 PLD PHOSPHODIESTERASE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 modified and this statement is not removed. "Removal of a 67-base-pair sequence in the noncoding region of protooncogene fos converts it to a transforming gene.";

Proc. Natl. Acad. Sci. U.S.A. 82:4987-4991(1985)

-1- FUNCTION: NUCLEAR PHOSPHOPROTEIN WHICH FORMS A TIGHT BUT NON-COVALENTLY LINKED COMPLEX WITH THE C-JUNYAP-1 TRANSCRIPTION FACTOR. C-FOS HAS A CRITICAL FUNCTION IN REGULATING THE DEVELOPMENT OF CELLS DESTINED TO FORM AND MAINTAIN THE SKELETON.

IT IS THOUGHT TO HAVE AN IMPORTANT ROLE IN SIGNAL TRANSDUCTION, CELL PROLIFERATION AND DIFFERENTIATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               use by non-profit institutions as long a modified and this statement is not removed. entitles requires a license agreement (See lor send an email to license@isb-sib.ch).
